WP Ultimo Settings

If you have the WP Ultimo (https://www.turnkeywebsitesblueprint.com/wpultimo) plugin installed and activated, you will see a tab called **WP Ultimo** in the Settings screen of DNS Manager.

On this tab you can choose which method you'd like your users to use when mapping their own domain to their subsite on your WordPress mutlisite network.

It also gives you the ability to update the text of the domain mapping meta box and modal popup in the WP Ultimo plugin.

Mapping Method

This is where you select the method you want your users to map their domains.

- **A Record (WP Ultimo default)** - This is how WP Ultimo's domain mapping works out of the box. If you're using DNS Manager for some other purpose than to facilitate mapping domains, keep this option selected.

- **DNS Provider's NS** - If you want your user's to move their DNS management to you (which we recommend), but you DON'T have a custom nameserver (//support.getkeypress.com/article/15-setup-custom-nameservers) set-up, then choose this option.

- **Custom NS (Make sure you have created your Custom NS before selecting this option)** - If you want your user's to move their DNS management to you (which we recommend), and you DO have a custom nameserver set-up, then choose this option.

Our plugin will automatically update the WP Ultimo domain mapping information to match your selection above. However you may want to provide more specific details. To do so, we give you the ability to customize all areas of WP Ultimo's domain mapping instructions using the areas below.

Custom Domain Metabox

Here you can modify the texts in the "Custom Domain" metabox that users see in their account.
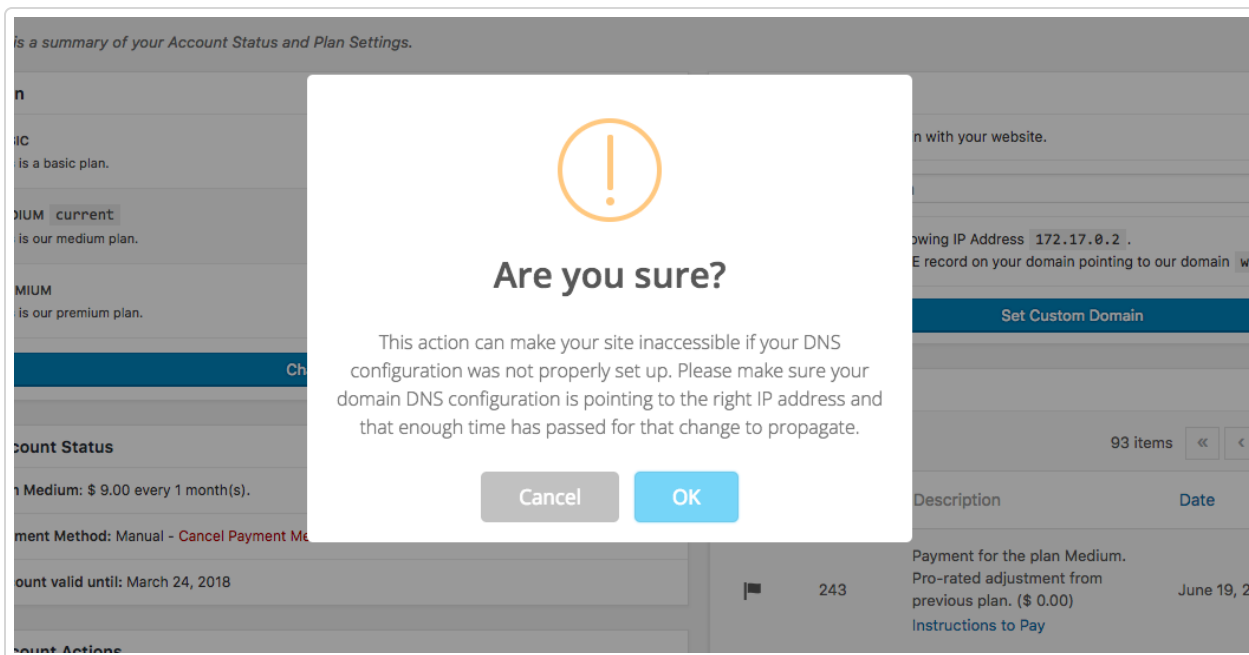

This is what it looks like by default:

You can edit the following areas of the box:

- **Title**

- **Description (Domain Mapping Supported) -** This will show only if domain mapping is supported on the customer's current subscription

- **Description (Domain Mapping NOT Supported) -** This will show if domain mapping is NOT supported on the customer's current subscription

- **Input Placeholder**

- **After Input**

- **Submit Button**

Modal Popup

Here you can modify the texts in the modal box that pops up when users submit the custom domain metabox form.

This is what it looks like by default:

You can edit the following areas of the box:

- **Title**

- **Text**

Available Shortcodes

Shortcodes available to use in certain fields of the metabox and modal editor include:

- **{{ip-address}}** - Displays the IP address of your primary zone

- **{{custom-ns}}** - Displays all the subdomains of your custom nameserver (ns1.mydomain.com, ns2.mydomain.com, etc.)

- **{{domain}}** - Displays your network's primary domain
